

Valve-Squeak™: Technology Breakthrough in Leak Detection

Designed for operations and maintenance personnel to perform frequent valve checks in their units, Valve-Squeak is an easy-to-use through-valve loss detection system. Small enough to fit in your pocket, Valve-Squeak isolates leaks of any size and in any valve saving you thousands, if not millions of dollars.

FIND LOSSES BEFORE THEY GROW

Simple Operation. A green light shows a "no leak" and a yellow LED bar graph shows a leak range of "small" to "very large". Once a leak is identified, your VPAC™ unit can be used for quantification. Valve-Squeak has high noise and vibration immunity and is Intrinsically Safe for use in hazardous, gaseous environments that require Class I, Div 1, IIC, T4 (currently only meeting US certifications).

- · The valve leak still needs to be verified and quantified by a VPAC system and operator.
- To keep the Valve-Squeak cost low, it contains simplified electronics.
- With the low cost of the Valve-Squeak it's possible to have many units in a refinery or plant to help the single VPAC operator locate potential loss.
- VPAC operators are still needed to quantify/ measure CFM or GPM.

WHY VALVE-SQUEAK?

- Locates leaks in valves including PSV, RV, CV and all others
- Used worldwide in refineries, chemical plants and offshore platforms
- Realizes plant savings ranging from \$500,000 to \$5,000,000/year when combined with a VPAC/5131 leak detection system (even leaks in a small valve can result in significant losses)
- · ROI is in the first use
- Identifies losses rapidly
- · Eliminates excessive flaring

SAVE TIME AND MONEY BY:

- Drastically cutting "sellable" gas losses
- Reducing turnaround time
- Maintaining plant integrity and safety
- Cutting back on maintenance costs
- Moving towards zero emissions
- Meeting EPA Clean Air requirements
- · A key tool for LDAR programs

For more information, call 1-609-716-4000 or

Specifications for Valve-Squeak:

Size:..... (LxWxH) 5.0" x 2.80" x 1.1

Weight:..........0.5 lbs.

Power:2-AA Alkaline Batteries 1.5V

Battery Life:.... > 4 days continuous operation

Processor:......Internal microprocessor

Display:.....16 LED's

Operating Temp: -22° - 158°F (-30° to 75°C)

Storage Temp: -40° - 185°F (-40° to -85°C)

Specifications for Sensors:

Sensor Temperature

S9203-IS.....-30° to +85°C

VS9203-IS-30° to +85°C

(Much higher temperatures can be reached with Waveguide. Ultimate temperature is dependant on exposure time.)

Intrinsically Safe

Class I, Div 1, IIC, T4, Intrinsically Safe (IS) apparatus
